

## ● EPIDEMIOLOGY AND MOLECULAR MECHANISMS OF INFLAMMATORY, AUTOIMMUNE AND HUMAN VASCULAR PATHOLOGIES

### INTRODUCTION

This research group is specialized in the study of the molecular mechanisms of cardiometabolic and autoimmune pathologies as well as in the pathology of the elderly. They belong to the University of Málaga, the Andalusian Health System-Junta de Andalucía and the Regional University Hospital of Málaga.

### RESEARCH TOPICS

- Diabetes, obesity and other cardiovascular risk factors.
- Clinical-epidemiological and genetic studies in systemic autoimmune diseases.
- Thromboembolic disease.
- Quality of care. Analytical assessment with special attention to patients with pluripathologies and palliative. Mortality analysis.

### SCIENTIFIC-TECHNICAL SERVICES

- Technical advice on cardiometabolic pathologies, autoimmune diseases, thromboembolic disease and aging pathology.
- Evaluation of the physiopathological mechanisms and epidemiological patterns of cardiometabolic pathologies, autoimmune diseases, thromboembolic disease and aging pathology.
- Studies on cardiometabolic pathologies, autoimmune diseases, thromboembolic disease and aging pathology.

RESEARCH GROUP LEADER: RICARDO GOMEZ HUELGAS
